

## Galley-Bar-Module

A new product innovation of Diehl Comfort Modules in cooperation with Lufthansa Technik providing operators an additional versatile, flexible, passenger and crew-friendly utilization of the galley area

## Characteristics

The new developed Galley-Bar-Module is extractable and allows a simple integration in a double trolley compartment within the existing galley space envelope. It offers a work top that can be used as a welcome desk, a bar counter, a self-service station and/or a duty-free shop. Additionally, the module significantly increases the limited available work deck surface. The Galley-Bar-Module is equipped with foldable shelves from the inside, mainly used for standard units and shelves for self-service and/or duty-free articles from the outside. The module can easily be integrated in all existing galleys and cross programs/fleets with focus on twin aisle aircraft and entrance areas without loss of cabin revenue space. The generated social area offers all passengers a zone for communication, relaxation, shopping and a bar, increasing passenger comfort and generating additional services. Whether as a duty-free shop or a bar with special drinks, this module generates additional revenue for the airline.

## Benefits

- Decreased costs for implementation
- Maintained cabin revenue space
- Possibilities for additional revenue
- Steady ticket prices at increased service level and comfort
- Lower cabin customization efforts
- Unchanged cabin installation time at increased cabin functionality

# Galley-Bar-Module

A new product innovation of Diehl Comfort Modules in cooperation with Lufthansa Technik providing operators an additional versatile, flexible, passenger and crew-friendly utilization of the galley area

## Features

- Multifunctional monument
- Easy plug & play solution
- Integrated solution
- Versatile utilization in different flight phases
- Compatible to existing galleys
- Alternative space utilization within the non-revenue cabin space

## Technical Data

- Standard galley with extractable versatile module
- Integrated in a double trolley compartment
- Simple plug & play solution without system connection
- Passive cooling for ice cubes and beverages
- Light integration with fibre optics
- No loss of cabin revenue space at increased cabin functionality
- Retrofit enabled solution
